

Bee Colony Extraction behind tiles of a Leigh Oast.

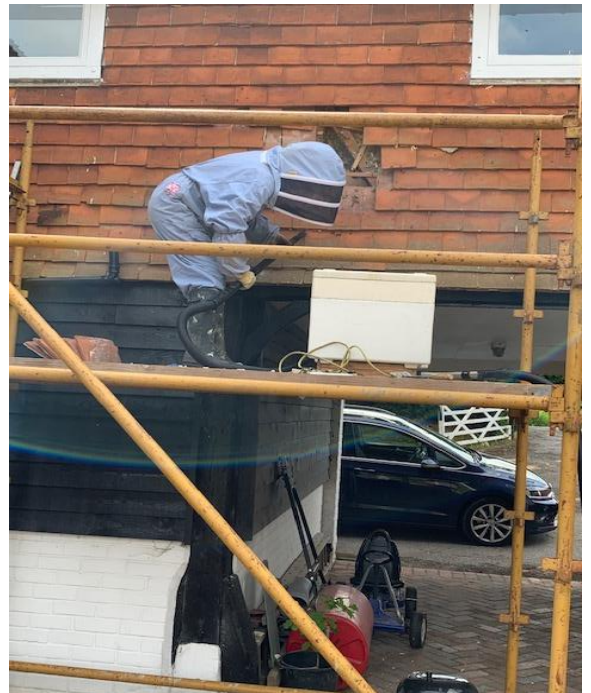

One solitary bee entering underneath tile cladding.

A close up exposes that this was a very Small Colony. The comb was then cut out and placed with bees into a poly nucleus.

Sarah removing several tiles to expose the colony.

Setting up the Bee-vac.

Vacuuming the few remaining bees into the poly nucleus.

The poly nucleus was left till late evening to collect foraging bees as they returned to their original home.

Bee removal complete. The quickest extraction ever, all completed in less than 2 hours!!!

Extraction Team – Sarah Rapley & John Farrow - June 2nd 2022
